

SUPPORTING DOCUMENT — COMPANION TO THE TECHNICAL PRD

Information Architecture Map

This diagram responds to mentor feedback on the Technical PRD's Information Architecture (Section 6): rather than describing navigation as a table, it shows how every screen actually links to every other screen — by role, and through the shared Activity/Team Workspace hub.

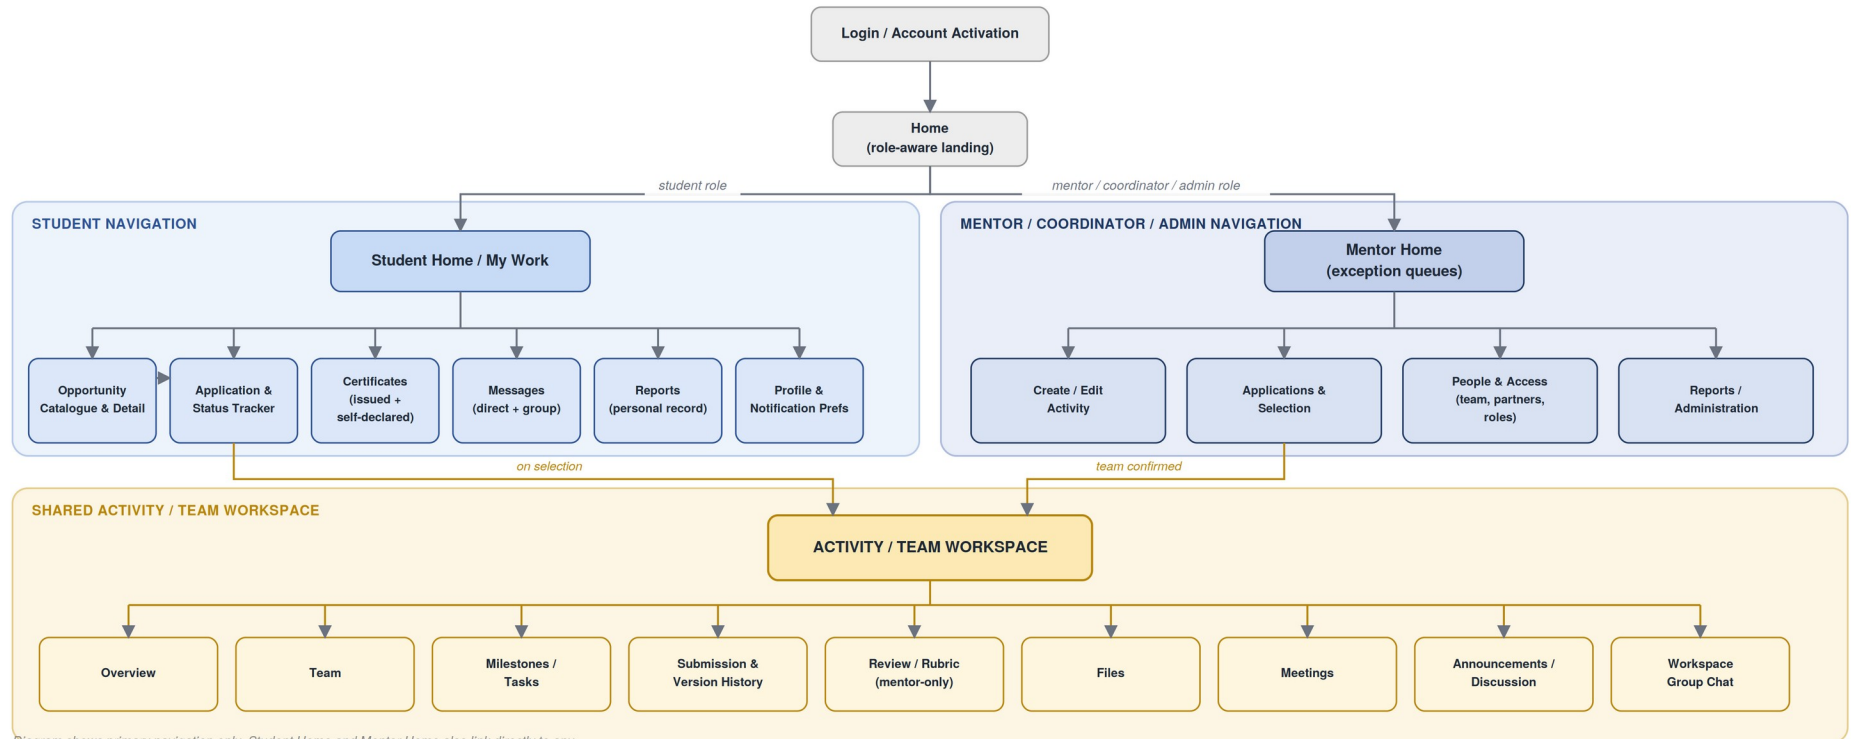

Diagram shows primary navigation only. Student Home and Mentor Home also link directly to any already-joined/assigned workspace (not drawn, to avoid crossing lines). Certificate issuance and Messages/Group-Chat overlap are secondary relationships, described in the accompanying notes.

How to read this map

Element	Meaning
Grey boxes	Shared entry points — Login and the role-aware Home screen every user lands on first.

Element	Meaning
Blue boxes	Student-only screens (My Work, Opportunity catalogue, Application tracker, Certificates, Messages, Reports, Profile).
Navy boxes	Mentor / Coordinator / Admin-only screens (Mentor Home, Create/Edit Activity, Applications & Selection, People & Access, Reports/Administration).
Gold box	The Activity/Team Workspace — the single hub both a student and their mentor reach for a given activity, once a team is confirmed.
Cream boxes	Workspace tabs — Overview, Team, Milestones, Submissions, Review/Rubric, Files, Meetings, Discussion, and Group Chat — all scoped to that one workspace.
Grey arrows	Primary, always-available navigation — role routing from Home, and each hub fanning out to its child screens.
Gold arrows	The moment a student or team formally enters a workspace (on selection, or once a mentor confirms a team), and the workspace handing off to each of its tabs.

Key structural points this map makes explicit

- There is exactly one Workspace hub per activity/team — students and mentors reach it from different starting points (Application & Status Tracker vs. Applications & Selection) but land in the same place, with permissions differing inside it.
- Mentor-only controls (Review/Rubric's evaluation tools, and the whole Mentor/Coordinator/Admin navigation cluster) are visually and structurally separated from student-facing screens, reflecting the least-privilege access principle (PR-01–PR-08 in the main PRD).
- The diagram intentionally shows only primary navigation — three secondary relationships are omitted from the drawing to keep it readable, and are noted instead: (1) Student Home / Mentor Home also link directly to any already-joined or already-assigned workspace; (2) a platform-issued certificate is generated from the Review/Rubric step on completion, not a disconnected admin action; (3) a student's Messages screen and a workspace's Group Chat tab surface the same underlying threads from two entry points.
